

LUSTER (LU)

This is another parameter, which has been found of importance in determining the exact purity of the diamond. The amount of light that the stone reflects and the type of light that is emitted by the stone determine luster of a diamond. Luster refers to the quality of a surface in reflected light. The luster of a diamond is usually described as adamantine luster.

CODE	DESCRIPTION
L1 – VERY GOOD	This diamond has very high quality reflection and emission of light.
L2 - GOOD	This diamond has high quality reflection and emission of light
M1 - LIGHT MILKY	This diamond has low quality reflection and emission of light
M2 – MEDIUM MILKY	This diamond has very low quality reflection and emission of light.
M3 – HEAVY MILKY	This diamond has very very low quality reflection and emission of light
