

TYPES OF INCLUSION (TOI)

Types of Inclusion depend upon the intensity of concentration of inclusion in entire diamond and ease of its visibility in diamonds.

CODE	DESCRIPTION	IMAGE
(A) VERY LIGHT OF SOFT	This inclusion is very soft and very light and has extremely low concentration and dependant on clarity grade.	
(B) SOFT	This inclusion is soft and light and has low concentration and dependant on clarity grade.	
(C) NORMAL	This inclusion is reasonably concentrated. Clearly visible and dependant on clarity grade.	
(D) HARD	This is highly concentrated. Prominently visible and dependant on clarity grade.	
(E) VERY HARD	Very Highly concentrated inclusion. Very prominently visible and dependant on clarity grade.	

These ratings are based on the presence and intensity in the entire diamond considering the clarity grade with 10x magnification.
